

# Database application - development review.

Is the data returned from searching the database in an appropriate format? \*

- ☒ Yes, its readable.
- ☐ No, the data is hard to read and does not correspond with headings.
- ☐ Other: .....

Does the database allow you to store and retrieve all of your data? \*

- ☒ Yes
- ☐ No
- ☐ Other: .....

Is the interface easy to navigate, if not please explain what could be added to improve the experience? \*

Yes it is easy to navigate and all of the options make sense. One thing that could be added in the future is tooltips - when you hover over a button a little tip appears explaining what will happen if you click the button

.....

What did you find problematic when using the customer window?

\*

It's a pretty boring design to look at. Doesn't have the Silver Dawn Colour Scheme.

Not all the entry boxes are labelled. (E.g. Surname, Address2)

All the text boxes are the same size, but it's likely that some might need more text? Maybe make some boxes bigger, or make them all bigger. (There's lots of grey space to the left and to the right.

It would be nicer if the labels were to the left hand side of the associated text entry box

\*\*\*Most importantly!!! - I can save blank records (everything except the automatically created Primary Key). It shouldn't be able to do this. \*\*\*
